## **DETAILED ACTION**

### ***Specification***

1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Sano, US Patent 4,920,420.

Regarding claim 1, Sano discloses a camera comprising: an image pickup optical system (Fig. 7 items 2, 3 and 4) for forming an optical image of an object; a photoelectric converting device (Fig. 7: 7) for converting the optical image to an electric signal; an optical device (Fig. 7: 6) disposed between the image pickup optical system and the photoelectric device; and vibration applying means (stepping motor in fig. 7: 17a) for vibrating the optical device (Col. 11, lines 33-57; col. 12, lines 13-51; col. 14, lines 3-27).

Regarding claim 2, Sano discloses a holding member (Fig. 7, items 32 and 34), which seals between the optical device and the photoelectric converting device (Col. 10, lines 31-53).

***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Sano, US Patent 4,920,420 in view of Shibata, US Patent 6,078,438.

Regarding claim 3, Sano does not explicitly disclose that the vibration applying means applies one of primary bending standing-wave vibrations and oval vibrations to the optical device.

However, Shibata teaches a vibration actuator (Figs. 4: 10 and 5: 10) for vibrating the optical device (Fig. Fig. 4: L51), wherein said vibration actuator applies a bending standing wave vibration to the optical device so as to perform focusing (Col. 8, lines 30-53; col. 9, lines 31-46; col. 11, line 52 – col. 12, line 18; col. 12, line 61 – col. 13, line 26; col. 13, line 55 – col. 14, line 5).

Therefore, taking the combined teaching of Sano in view of Shibata as a whole, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify Sano by using a vibration actuator applying bending standing wave vibration to the optical device. The motivation to do so would help the camera to accurately perform focus adjustments to the lens group as suggested by Shibata (Col. 3, lines 1-6).
